PROFESSIONAL SUMMARY

Computer Science graduate and Python Full Stack & Generative AI Developer with hands-on experience building and deploying production-grade web applications and AI-driven systems across the full software development lifecycle. Skilled in building scalable backends with FastAPI and Flask, integrating AI (Gemini AI, OpenAI API, LLMs, RAG), root-cause analysis, SQL optimization, REST API design, and cloud deployment on AWS and Vercel within Agile teams.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL
Generative AI, ML & Data: Generative AI, LLMs, RAG, Prompt Engineering, Gemini AI API, OpenAI API, Ollama, ChromaDB, CNN, NumPy, Pandas
Backend & Frontend: FastAPI, Flask, RESTful APIs, React.js, HTML5
Databases: MySQL, Firebase
Cloud & DevOps: AWS (EC2, S3, Lambda, RDS), Docker, Render, Vercel
Tools & Practices: GitHub, Postman, Visual Studio, Agile/SDLC

PROFESSIONAL EXPERIENCE

Python Full Stack Intern | Motive Computer Education, Guntur, India — **Apr 2025 – Mar 2026**

- Developed and maintained end-to-end full-stack applications using Python, FastAPI, React.js, and MySQL, prioritizing availability, security, and performance (for example, apps with user login, dashboards, and stored data).
- Designed and integrated secure, low-latency RESTful APIs so the React.js frontend and FastAPI backend could exchange data smoothly, such as submitting a form and receiving results instantly.
- Performed debugging and root-cause analysis to resolve user-reported issues quickly, for example, tracing a failed request through the API and database to fix the underlying bug.
- Refactored legacy code and optimized SQL queries so data-heavy pages loaded faster, making the application easier to scale.
- Participated in all phases of the Agile SDLC, driving continuous improvement through code reviews, automated unit testing, and deployment monitoring.

Software Development Intern (Remote) | KodNest Technologies, Remote — **Jul 2024 – Mar 2025**

- Built and supported web applications using Python (Flask) and MySQL, following enterprise code quality standards.
- Improved response speed by optimizing database schemas, indexing, and complex queries, for example, adding indexes to frequently searched columns.
- Collaborated with cross-functional engineering teams on feature development, third-party API integration, peer code reviews, testing, and deployment.
- Used Git and GitHub for version control, release management, and issue tracking in Agile sprints, for example, developing on feature branches and merging through pull requests.

Cloud Intern (Remote) | AWS Virtual Internship, Remote — **Jan 2024 – May 2024**

- Provisioned, deployed, and managed scalable cloud infrastructure using AWS services (EC2, S3, Lambda, and RDS).
- Configured EC2 virtual servers and RDS databases to build fault-tolerant hosting and testing environments, for example, hosting a web app with a managed database.
- Built serverless workflows with AWS Lambda and managed object storage using Amazon S3, for example, triggering a function when a file is uploaded.
- Designed environment configurations aligned with the AWS Well-Architected Framework, focusing on security, reliability, cost optimization, and operational efficiency.

KEY PROJECTS

Retrivana: AI Chat with Private Company PDFs [GitHub] — **Aug 2026 – Present**

Python, FastAPI, React.js, Ollama, ChromaDB, Docker

- Developed an AI application where users upload company PDFs, like HR policies, and ask "How many leave days do I get?" to get the answer and its page.
- Made answers more accurate by using two search methods together (keyword search and meaning-based search) and then ranking the best results.
- Kept data private by running the AI on the user's own computer with Ollama; added login, Google sign-in and password reset so users see only their files.
- Added a usage dashboard, saved chat history with PDF download, automated tests, and Docker so the app is easy to set up and run.

CareerNova AI: AI-Powered Career Assistant [GitHub] [Live] — **Jun 2025 – Mar 2026**

Python, FastAPI, React.js, MySQL, Google Gemini AI, Vercel, EmailJS

- Developed a full-stack AI platform tested with 50+ users, combining 7+ career workflows (dashboard, ATS analysis, AI resume optimization, job tracking, interview prep, outreach emails, history).
- Built FastAPI REST APIs for ATS scoring, resume analysis, interview prep, job tracking and user history; integrated Google Gemini AI for resume rewriting, career recommendations and job suggestions based on skill gaps.
- Designed a React.js dashboard with MySQL data storage and EmailJS integration for job outreach; deployed on Vercel and validated end-to-end with 50+ test cases.

AI Code Mastery Hub [GitHub] — **Jul 2024 – Mar 2025**

Python, Flask, HTML, MySQL, OpenAI API

- Developed an AI quiz prep platform tested with 50+ users, with automated quiz evaluation, instant feedback, performance tracking and learning videos covering C, Python and other programming topics.
- Integrated OpenAI API for AI explanations and personalized recommendations; designed REST APIs and a MySQL database to manage users, quizzes, results and progress dashboards.

Medicine Identification for Blind People (Deep Learning) [GitHub] — **Jan 2024 – May 2024**

Python, NumPy, Pandas, Deep Learning, CNN

- Developed a deep learning system that helps visually impaired users identify medicines from images; prepared the dataset using Python, NumPy and Pandas (data cleaning and image preprocessing).
- Trained a CNN to classify medicine images into categories, achieving ~92% accuracy on test data.

EDUCATION

B.Tech in Computer Science and Engineering | Sri Vasavi Institute of Engineering & Technology — **2020 – 2024**

CGPA: 8.55 / 10 • Academic Topper (B.Tech, 2020–2024)

CERTIFICATIONS & ACHIEVEMENTS

Cloud Computing A+ (Honeywell, 2023) • SQL (HackerRank, 2024) • Python Essentials I (Cisco, 2023) • Kavach & Flipkart GRID 5.0 National Finalist
